

July 15, 2026

Dear Hiring Manager,

Over the last 10 years, the central theme to my career has been to build a bridge between engineering, business, sales, product, vendor and customer teams. More specifically, how we can either increase pipeline, get more deals in positions to win, or execute on a delivery project. And always aligning my team with the right frameworks to execute consistently.

I've worked inside system integration firms, and I understand how they operate for their clients. Especially working closely with ecosystem vendor partners such as Microsoft, Google, Mixpanel, and RSA Security. Directly reporting to directors, client account leads & sales capture leads to put together proposals & solutions - always backed up with metrics, data, analysis to show 'Why' these digital transformations are so critical and urgent for our clients.

Here are key examples in my career where I've coordinated, collaborated and led my team to win and move deals forward by working with internal teams and ecosystem vendors:

- CitiBank (Accenture) - One of my tasks was working with Accenture's ecosystem partner - Mixpanel. I led a cross-functional team to build a proposal to implement mixpanel inside the bank's Credit Card & Loan product. The bank has 200+ retail clients using the product. I worked with the Mixpanel AE, Accenture Song (my team), and Citibank Product Management team. Setting up POC's in client test environments showing how mixpanel works. I set up meetings with various working groups in the product management business unit to do discovery, demo's, help pitch solutions and secure technical wins. I aligned all three parties to get the first retail client onboarded into mixpanel for the bank.
- Federal Client (Accenture) - The Federal client had 800+ applications which needed to be assessed to determine if they were required to be moved to the cloud due to a recent federal mandate. In my role, I led a team of architects, analysts and SMEs to conduct discovery on 200+ of those applications. We had to proactively reach out to system owners for those applications and run through our internal Accenture Playbook for this cloud modernization discovery engagement. Working closely with both Microsoft & Google ecosystem partners, Accenture Federal Services, and the Federal client. Built out proposals, secured sign-offs, and brought in substantial revenue & growth for Accenture Federal Services.
- Maxxion Technologies (SaaS Product) - My role was two parts - 1) I led product, engineering 7 testing teams to build the HoshinCloud product, design new feature requests, and lead development teams to build the final product. 2) Worked with sales manager in new business activities to build pipeline, set up discovery sessions, build demo's, and secure the technical win to onboard new customers & users. Working in ambiguity, by multithreading within prospective accounts, to meet more future users to help us build better proposals, customer success plans, and user base retention.
- PwC - As a technology consultant, I was tasked with leading the detailed requirements gathering with the client for Oracle CC&B. This was a large system integration project with 4 main platforms - Salesforce, Workday, ClickSoftware and Oracle CC&B. We were digitally transforming a fleet & asset management workflow critical for a Power & Utilities client. This was my first introduction to Workday as a platform, especially when conducting data integration field mapping to pass key data points between Maximo and Workday.

I'm very excited to interview for the Senior Manager, Partner Solutions Consulting position on your team. I would love to learn more about the Workday GSI team, Sana platform and the exciting initiatives planned for 2026 and beyond. Looking forward to the next step in this process.

Best regards,
Tariq Kottai

Objective

Customer facing technology professional with 10+ years running technical discovery, solutioning system integrations, and conducting product demonstrations for commercial and federal clients. Ability to partner with sales teams to understand requirements, showcase solutions through demos, gather client feedback to refine offerings, and serve as a trusted technical architect. Experienced in leading teams to build system integrations, troubleshooting, and translating complex technical concepts to diverse audiences. Passionate about emerging technologies.

Professional Experience

Accenture Federal Services - Management Consultant

February 2022 – February 2026

- Partnered with Citibank Risk & Compliance product management teams and Mixpanel team on a financial infrastructure initiative, to modernize a credit card & loan customer acquisition funnel workflow, for the bank's co-branded retail clients. Led a team of 5 to perform technical discovery, led solution planning, and coordinated API integrations & process flow mapping between core financial management systems - Mixpanel, Finicity and FICO XD with Fiserv. Coordinated with client finance and IT decision makers, and delivered measurable improvements in underwriting and decisioning processes to increase customer ROI, profitability and margins.
- Led pre-sales discovery strategy for option year 1 of a \$150MM Federal cloud modernization program. Developed roadmaps, technical briefs, and delivered 26 presentations for senior client leads. Led daily stand-ups with Cloud vendors, client and internal teams (infrastructure, software, testing, change mgmt, cybersecurity) while also supporting ATO governance to drive successful adoption while addressing cybersecurity vulnerabilities, network security, and DoD compliance requirements.
- Led pre-sales discovery strategy for \$30MM Federal hybrid cloud modernization initiative. Conducted 200+ discovery across 800+ applications in the Department, led a team of 5 to run technical workshops, delivered custom demo's, coordinated internal PowerBI/Jira API client facing tracking dashboards. Achieved 20% cost savings with 15% faster delivery while aligning to public sector compliance standards.
- Solutioned & implemented POC to secure technical win with RSA Security and Microsoft Azure ecosystem partners, to build out core identity and access management repositories for both on-premise and cloud environments. Applied NIST 800-53 compliant controls, zero-trust principles (least privilege access), to meet stringent client security and governance requirements.

Maxxion Technologies - GTM Manager

August 2018 – February 2022

- Worked closely with sale's manager to support customer discovery sessions to understand business objectives and align product capabilities with customer requirements. Exceeded quota in 2Q21(158%) & 4Q21(172%).
- Delivered customized demos on new SaaS features - gathered client feedback/market, collaborated with product teams to revamp modules, increasing user engagement 30% and retention 40-60%.
- Managed 8-person development team; prioritized backlog, executed features, and coordinated stakeholders for rapid delivery and operational excellence (>85%).
- Created a technical enablement/training material portal (Demo video/ release docs) for onboarding 500+ users across multiple client business units.

PwC - Advisory Consultant

January 2017 – July 2018

- Led technical discovery/workshops for system integration projects (Oracle CC&B, ClickSoftware, Salesforce, Workday). I gathered technical requirements, proposed solutions, and secured client approvals before moving to implementation phase.
- Facilitated solution architecture designs by understanding functional and technical work flows specific to the Power & Utilities industry, by speaking to and aligning with client to document requirements.

TotalLoop - Business Development Representative

August 2016 – December 2016

- Executed sales strategies and coordinated product demonstrations to build a \$950k pipeline. Qualified prospects and achieved 100% quota per quarter through disciplined follow-up.

Education

Master of Science in Communications – Northwestern University

Bachelor of Science in Electrical Engineering – University of Illinois at Chicago

Skills

Solutions Architecture | Technical Discovery | Product Demonstrations | Solution Design & Roadmaps | APIs & System Integrations | | Client Feedback & Product Collaboration | Pre - Sales | Technical Documentation | Problem-Solving | Cross-Functional Collaboration | Customer Workshops | Cloud Architecture | LLM Agent Integration | Network & Cyber Security | Enterprise SaaS | Identity & Access Management | Quarterly Business Review | GDPR, Compliance & Governance | Costs & Value Modeling | Agile Project Management

A Few AI Projects - [Link to GitHub](#)

I enjoy experimenting with new tools and technologies to keep updated with the latest technology trends to see how I can incorporate them into my professional work:

- **Google Cloud MCP Connector + BigQuery + VisionAI:** Created an AI SaaS tool for a mock sales team to query insight on past performance based on previous quarters data. Used Google MCP connectors, BigQuery, Vision API, Vertex AI, Gemini and responsive HTML frontend. ([Demo video included in GitHub](#))
- **Claude + Stripe:** Built test-mode Stripe checkout with Python backend/Webhook API for payment sessions/event handling and HTML5 frontend. Validation testing through Postman.
- **Replit + Postman:** Developed multi-city weather dashboard using Python/FastAPI backend for real-time API calls and responsive HTML5 frontend. Validation testing through Postman.
